

Table 1: AI exposure and unemployment growth by occupation

	(1) RF	(2) Cosine weighted	(3) Cosine nearest
AI exposure	3.411*** (0.425)	0.912*** (0.203)	0.747*** (0.181)
Observations	502	502	502
R^2	0.113	0.044	0.033
Mean dep. var.	-0.692	-0.692	-0.692
CNO unit	Yes	Yes	Yes

Notes: Unit of observation is CNO occupation. Dependent variable is average monthly log growth in registered unemployed from 2021-01 to 2026-01, in percentage points. Only aggregate rows with dimension=total, category=Total, and gender=Total are used. Each column reports a separate OLS regression with HC1 robust standard errors (one observation per CNO, so CNO clustering is not applicable for this cross-section) in parentheses. *** $p < 0.01$, ** $p < 0.05$, * $p < 0.10$.
